

Printer-A200 Industrial 3D Printer Operation Guide

Product: Industrial Printer | Model: Printer-A200 | Document Type: OPERATION_MANUAL

1. Printer Overview & Touch Screen

The Printer-A200 is an industrial additive manufacturing system designed for high-resolution thermoplastic prototype and end-use part production.

- Build Volume: 300 x 300 x 400 mm.
- Extruder Temperature: Up to 300°C. Heated Bed Temperature: Up to 120°C.
- Filament Diameter: 1.75 mm high-precision spool feed.

2. Paper / Filament Feed & Printing Setup

- Loading Filament: Heat nozzle to 215°C, feed filament through optical runout sensor into drive gear.
- Bed Leveling: Automatic 25-point capacitive matrix mesh leveling before every print cycle.
- Clearing Paper/Filament Feed Errors: If feed error occurs, press PAUSE on touchscreen, unload filament lever, and pull out clogged strand.
